EXAMINER'S AMENDMENT & STATEMENT OF REASONS FOR ALLOWANCE

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Kevin W. Guynn on 23 November 2009.
3. The application has been amended as follows:

50. (Currently Amended) A method of washing items during a wash cycle in an automatic washer having a wash chamber rotatable about a central axis, the method comprising the steps of:

loading items into the wash chamber;
supplying wash liquid into the wash chamber;
oscillating the wash chamber about the central axis alternately through a clockwise angle of rotation and a counter-clockwise angle of rotation with speed varying oscillations;
~~repeatedly~~ randomly varying the speed of the oscillations above and below a base speed periodically during subsequent oscillations in the wash cycle;

maintaining the speed varying oscillations to effect less than a one gravity centrifugal force on the items such that the items will tumble in said wash chamber; and
~~repeatedly~~ randomly varying the angle of rotation traversed by the wash chamber during each clockwise and counter-clockwise rotation above and below a base angle of rotation periodically during subsequent oscillations in the wash cycle.

51. (Currently Amended) A method of washing items during a wash cycle in an automatic washer having a wash chamber rotatable about a central axis, the method comprising the steps of:

loading items into the wash chamber;
supplying wash liquid into the wash chamber;
oscillating the wash chamber about the central axis alternately through a clockwise angle of rotation and a counter-clockwise angle of rotation with speed varying oscillations;

~~repeatedly~~ randomly varying the speed of the oscillations above and below a base speed periodically during subsequent oscillations in the wash cycle;

maintaining the speed varying oscillations to effect less than a one gravity centrifugal force on the items such that the items will tumble in said wash chamber; and
pausing the rotation of the wash chamber for a length of time between each clockwise and counter-clockwise rotation.

52. (Currently Amended) The method according to claim 51, wherein the length of each pause ~~repeatedly~~ randomly and periodically varies throughout the wash cycle.

53. (Currently Amended) A method of washing items during a wash cycle in an automatic washer having a wash chamber rotatable about a central axis, the method comprising the steps of:

loading items into the wash chamber;

supplying wash liquid into the wash chamber;

oscillating the wash chamber about the central axis alternately through a clockwise angle of rotation and a counter-clockwise angle of rotation with speed varying oscillations;

maintaining the speed varying oscillations being maintained to effect less than a one gravity centrifugal force on the items such that the items will tumble in said wash chamber; and

~~repeatedly~~ randomly varying the speed of rotation of the wash chamber ~~randomly~~ above and below a base speed of rotation periodically during subsequent oscillations in the wash cycle.

Allowable Subject Matter

4. Claims 50-56 are allowed.
5. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or reasonably suggest the claimed invention. Specifically, the prior art of record fails to teach or reasonably suggest the claimed washing method comprising, *inter alia*, oscillating the wash chamber with speed varying oscillations by randomly varying the speed of the oscillations above and below a base speed periodically during subsequent oscillations in the wash cycle which provides an increased effect on washing performance such as reduced damage to clothes with as good or better cleaning action, as instantly claimed and argued by the Applicant in the last response. For at least the foregoing reasons, claims 50-56 are believed to recite patentable subject matter.
6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph L. Perrin whose telephone number is (571)272-1305. The examiner can normally be reached on M-F 8:00-4:30.

8. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael E. Barr can be reached on (571)272-1414. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
